

Green: context text. Grey: English name only. Arrows are drawn when both concepts are on this page.

access matrix	admission control	binary digit	circuit logic	column address	communications engineering
computational complexity	cyclic redundancy check	directory structure	divide and conquer	dynamic dispatch	dynamic routing
execution overhead	external resource	file lock	graph traversal	hardware fault	high-speed bus
in-degree	index value	kernel stack	label	leaf node	logical partition
machine cycle	mass storage	master boot record	multilevel feedback queue	nonterminal symbol	occupied space
operational efficiency	operational semantics	output channel	page frame	paging	predictability
process state	processing flow	processing unit	program status word	protection bit	radix conversion
